

What makes the **9000 YOU SELECT**® *The Rolls Royce* of Vending Machines?

1 The Space-Saver

The #1 reason stores and businesses will not let us place a vending machine in their building is they have no floor space for the machine! That's why I designed my elegant machine to be as **compact** as possible – a “**SPACE-SAVER**”! How did I achieve this while other vending machine manufacturers continue to design their machines horizontally? I broke the mold. I went ahead and designed my machine **vertically** instead of horizontally. My machine is only **11 inches wide**! Yet it still offers four (4) different products and it can be placed easily into any **corner** of a room. This makes it the easiest machine to locate/place!

2 4 Interchangeable Canisters

Four (4) rectangular, shatterproof display, polycarbonate, interchangeable canisters hold approximately **9 pounds** of candy each. You can purchase extra canisters, and **refill** them back at your **home**, and then swap out the empty canisters for the filled canisters at the stores and businesses. By doing this, you will cut your service time in half! The 4-in-1 offers four (4) choices of candy in a vertical space required by only one machine.

3 Durable Paint on Zinc, Steel Case

Top quality, 2-coat, powder finish/paint, long lasting, scratch and rust resistant. Strong, commercial grade, anti-tamper, steel case **helps prevent break-in**! The case is constructed of expensive “**zinc**” steel and then baked at over 1000 degrees to produce what is termed “**treated, fired steel**”! By using this combination of **zinc** and treated, fired steel, the **case will last you a lifetime**!

4 The Smart Mech®- 4 Zinc, Steel Coin Mechanisms

Strong commercial grade, **anti-slug** and **jam resistant**, **chrome-plated** coin mechanisms! Constructed of expensive “**zinc**” steel and then baked at over 1000 degrees to produce what is termed “**treated, fired steel**”! By using this combination of **zinc** and treated, fired steel, the coin mechanism will **last you a lifetime**! **Adjustable** up to **\$1.50** by purchasing a new parts kit!

5 Fast and easy access to your money!

My machine has two (2) separate coin drawers, which can be accessed from the **sides** of the machine **without** requiring the removal of the four (4) interchangeable canisters on top or without **pulling** the machine out from the **wall** and **lifting** it around.

6 Revolving vending carousel

Rotates **360 degrees** in either direction on a steel ball bearing, turntable to allow your customers **easy access** to all four (4) products.

7 3 Zinc, Steel Barrel Locks

State-of-the-art commercial grade barrel/tubular locks constructed with “**zinc**” steel! **Anti-tamper**, **anti-pickable** locks help **prevent break-in** to protect your candy and money!

8 4 Spill Trays

A must have feature to keep snacks from spilling onto the floor!

1 The Space-Saver

The First Vending Machine Ever To Be Designed Vertically instead of Horizontally!

Fits Into Any Corner!

Easiest Machine to Locate/Place!

Height approx. 45 inches tall
